

Join the global team in Catania.

The New Development Unit in Catania is now operative. The Unit focuses on Wireless Data Applications developed on top of the latest network features and platform technologies such as WAP, Multimedia Messaging and Location Positioning. Moreover Nokia has recognized that the increasing sophistication of modern telecommunications services demands a closer integration between operator's telecommunications networks and the service/business management systems that support them. This is why the Service Integration Center has been created. This is what we would like you to bring with you: an open-minded, flexible, initiative taking, good problem solving and decision-making attitude. Good communication and interpersonal skills, readiness to work in dynamic and international environment as well as teamwork capabilities are all required skills. Good knowledge of the English language, both spoken and written, is essential. A positive attitude, enthusiasm and readiness to accept long stays abroad are also required. Based in Catania we offer you the following opportunities:

Wireless Data Application Program Manager ref. WDAP06

The Wireless Application Program Manager leads a product program consisting of various projects within R&D and other functions. He/She ensures that the program meets the requirements in terms of product specifications, project schedules, cost management and resourcing. The Wireless Application Program Manager has gained several years' work experience as software Program/Project Manager in a telecom or datacom environment. He/She has developed skills on project management, project planning/implementation, project financial planning/reporting and is capable to coach international teams of professionals. A background in Research & Development is a benefit especially with a good knowledge of software application design, C/C++, WML/HTML, Java, GSM, TCP/IP, LAN/WAN, WAP and GPRS, Microsoft NT, Unix.

Wireless Application Protocol (WAP) Specialist ref. WAPS06

The WAP Specialist is an acknowledged expert who uses his/her technological expertise in specific problem solving situations in different projects/programs. He/She is involved in the definition of the product roadmap. The Wap Specialist has competence/experience of WAP/HTTP, WML/HTML, TCP/IP, GSM, telecommunications protocols, Unix and Windows NT operating systems.

General Packet Radio Service (GPRS) Specialist ref. GPRSS06

The GPRS Specialist is an acknowledged expert who uses his/her technological expertise in specific problem solving situations in different projects/programs. He/She is involved in the definition of the product roadmap. The GPRS Specialist has competence/experience of GPRS Core Network, TCP/IP, GSM, telecommunications protocols, Unix and Windows NT operating systems.

Intelligent Network System Specialist ref. INSS06

The Intelligent Network System Specialist is an acknowledged expert who uses his/her technological expertise in specific problem solving situations in different projects/programs. Specialists are involved in the definition of the product roadmap and/or they contribute with their expertise in specific deliveries of Integration Projects to Nokia Telecommunications' system customers. He/She has a deep competence/experience of Intelligent Network Platform, Service Creation and Integration Projects. Therefore he/she has a good understanding of GSM, telecommunications protocols, Oracle, Unix and Windows NT operating systems.
